Analyst's Summary Of Results

Update at end of 15 January 2012

After 4.5 months of operation total profit for BestWinBets stands at \$21,330 equating to an average monthly profit of \$4700+ per month. The strike rate has remained fairly consistent and is currently hovering at 25.5% which itself signifies consistency and minimal losing streaks. As with any successful betting system the profitability will grow in patches when hot winning streaks are encountered and this is simply the nature of the beast. The staking strategy we employ well and truly takes advantage of hot streaks and minimizes risk during less successful periods. As we move through 2012 we are very confident going on the 4.5 months of results so far that profitability will continue to grow proportional to what has already been achieved.
